

1201 Baja California Transmission and Transformation (5th Phase)

- The purpose of this project is to ensure the supply of electricity, in the state of Baja California, even in non-serious contingency situations, with the required quality, reliability and safety standards.
- This project will also reduce the electric system's operating costs in the Northwest region of the country.

Project Details:

- This project involves the engineering, the supply of all material and equipment, spare parts and special tools, the construction and electro mechanical works, quality assurance, testing, training and commissioning.
- The project will consist of three electrical substations with four feeders at 230 and 161 kV. It also includes two transmission lines at 230 and 161 kV with a total length of 31 circuit kilometers (ckm).
- The estimated project implementation time is 17 months.

Geographic Location: State of Baja California

Relevant Facts:

Estimated Investment: **13 million** U.S. dollars

Length (approx.):	31 ckm
