

1802 Power Substations and Transmission Lines North (2nd Phase)

- According to the forecast of the CFE, the capacity of the transmission network in the Northern region of Chihuahua will be saturated by 2016.
- Thus, it is necessary to meet the increased demand to prevent contingencies in such region.
- This project will provide the necessary energy to the interconnected Northern system, and particularly, the Juárez, Moctezuma, Villa Ahumada, Casas Grande and Chihuahua regions.

Project Details:

- This project will be located in the State of Chihuahua
- It consists of the power transmission line Cereso - Moctezuma, with 400 kV and a total length of 159 km-circuit. It also includes the Cereso and Moctezuma power substations and two 230 kV feeders.
- The estimated project implementation period is 17 months

Geographic location: State of Chihuahua
