

# 1911 Transmission Network Associated to CC Empalme II

- This project will be located in the States of Sinaloa and Sonora. Its purpose is to contribute to satisfy the demand of electric energy forecasted for the Northwestern part of the country. This will keep the regional reserve margins in the standards defined for the electric system, providing a reliable supply of electricity.
- This project will transfer the electric energy generated from the Combined Cycle Power Plant Empalme II, which is currently under bidding process to the National Electric System.
- The Ministry of Public Administration appointed Transparencia Mexicana as social witness for this public bid.

## Project Details :

- This project involves the engineering, the supply of all material and equipment, spare parts and special tools, the construction and electro mechanical works, quality assurance, tests, training and commissioning.
- The project includes three power transmission lines of 400 kV, with a length of 119 circuit kilometers. Also comprises four power substations with voltages of 400 and 230 kV and fourteen feeders.
- The estimated project implementation time is 24 months.
