

1921 Reduction of Energy Distribution Losses (4th Phase)

- The purpose of the project is to reduce energy losses in two scopes. The first one refers to non-technical losses associated to the lack or unreliable measurement readings on the energy consumption. The second one is associated with the reduction of technical losses caused by lack of maintenance and modernization of the distribution networks.
- This phase will benefit the State of Mexico and Federal District.

Project Details:

- The project includes ten works to reduce losses and measurement assurance activities with 250,522 AMI (Advanced Metering Infrastructure) type meters, which communicate via radio frequency.
- It also includes 8,622 distribution transformers and the installation of 428 km-circuit distribution lines to serve the State of Mexico and the Federal District.
- The estimated project implementation period is 19 months.

Geographic location State of Mexico and the Federal District
