

1921 Reduction of Energy Distribution Losses (6th Phase)

- The purpose of the project is to reduce energy losses in different two areas. The first refers to non-technical losses associated with poor or unreliable readings of measurement of the energy consumption. The second is associated with the reduction of technical losses caused by lack of maintenance and modernization of the distribution networks.
- This phase takes place in the Central Area of the Valley of Mexico, benefiting the Federal District.

Project Details:

- The project includes eight works for measurement assurance activities with 308,071 AMI (Advanced Metering Infrastructure) type meters, which communicate via radio frequency. These meters will be installed in the Federal District.
- The estimated project implementation period is 18 months.

Geographic location Federal District
