

1921 Reduction of Energy Distribution Losses (7th Phase, 2nd bid)

- The purpose of the project is to reduce energy losses in two areas. The first one refers to non-technical losses associated to the lack or unreliable measurement readings on the energy consumption. The second one is associated with the reduction of technical losses caused by lack of maintenance and modernization of the distribution networks.
- This phase is located in the Central region of the Mexico Valley, benefiting also the State of Mexico.

Project Details:

- The project includes four works to reduce losses and guarantee measurement activities with 189,107 self-managed meters.
- It also includes 4,412 distribution transformers and the installation of 335 km-circuit to serve the State of Mexico.
- The estimated project implementation period is 19 months.
