

2021 Reduction of Energy Distribution Losses (4th Phase)

- The purpose of this project is to reduce energy losses in two scopes. The first one refers to non-technical losses associated to the lack or unreliable measurement readings on the energy consumption. The second one is associated with the reduction of technical losses caused by the lack of maintenance and modernization of the distribution networks. Additionally, it will help to reduce the electrical operational cost.
- This phase will be implemented in the Peninsular region, which will benefit the States of Campeche and Quintana Roo.

Project Details:

- This project includes the engineering, the supply of all material and equipment, spare parts and special tools, the construction and electro mechanical works, quality assurance, testing, training and commissioning.
- This project will consist of the construction and installment of three works needed for the measurement assurance. It includes the supply and installment of 93,241 AMI type meters, which will use free communication technology.
- The estimated project implementation time is 19 months.

Geographic Location:

States of Campeche and Quintana Roo

Relevant Facts:

Estimated Investment: **41 million** U.S. dollars

Meters:	93,241
