

2021 Reduction of Energy Distribution Losses (7th Phase)

- The purpose of this project is to reduce energy losses in two scopes. The first refers to non-technical losses associated to the lack or unreliable measurement readings on the energy consumption. The second one is associated with the reduction of technical losses caused by the lack of maintenance and modernization of the distribution networks. Additionally, it will help to reduce the electrical operational cost.
- This phase will be implemented in the Northern region of the Valley of Mexico, which will benefit the State of Mexico.
- The Ministry of Public Administration appointed a social witness for this public bid.

Project Details:

- This project includes the engineering, the supply of all material and equipment, spare parts and special tools, the construction and electro mechanical works, quality assurance, testing, training and commissioning.
- This project will consist of the construction and installment of fourteen energy distribution losses works. It includes the supply and installment of 336,935 AMI type meters, which will use free communication technology, and 19,338 distribution transformers with a total capacity of 309.5 MVA. It will also include a distribution line at 23 kV with a total length of 870 circuit kilometers (ckm).
- The estimated project implementation time is 19 months.

Geographic Location: State of Mexico

Relevant Facts:

Estimated Investment: **242 million U.S.**

Meters:	336,935
