

## Gas Pipeline El Encino- La Laguna

- According to CFE’s forecast by the end of 2028 the electric power plants located in the States of Chihuahua and Durango will be demanding 393 millions of cubic feet per day (“MCFD”).
- The natural gas pipeline system will need new fuel supplier both domestic and international. The electric industry requires shipping redundancy in the gas pipeline system.
- CFE will enter a transportation services agreement for natural gas that will be delivered by the corresponding shipper through this gas pipeline. Eventually, CFE will carry out natural gas open seasons, so any third party is able to reserve additional capacity if the operation of the gas pipeline allows it.
- In the context of the Energy Reform, CFE will be able to commercialize natural gas to the industrial sector.

### Project Details:

- A 42” pipeline transporting natural gas coming from the Waha Basin in Texas.
- This gas pipeline will supply 393 MCFD to CFE’s thermo-power plants located in the States of Chihuahua and Durango, and eventually it is estimated that it will supply 1,107 MCFD to the central and western regions of the country.
- Gas pipeline interconnected to the Ojinaga-El Encino gas pipeline and gas pipeline systems of the central and western regions of the country.

### Geographic Location: States of Chihuahua and Durango

### Relevant Information:

Estimated Present Value: **1,291 million** U.S. dollars

<b>Capacity:</b>	<b>1,500 MCFD</b>
