

Nueces – Brownsville Gas Pipeline (Texas, USA)

- Nueces – Brownsville gas pipeline will transport natural gas from the South of Texas. This pipeline will help to meet the requirements of natural gas in the Eastern, Central and Western regions of the country.
- Since this project will be located in the United States, it was tendered in accordance with the process of that country through a Request for Proposal (RFP).
- This project will be interconnected on the Mexican side with the Sur de Texas – Tuxpan (Subsea) gas pipeline. This system will supply natural gas to new power generation plants, as well as those currently operating with fuel oil, which will be converted to use natural gas as their base fuel.
- Transparencia Mexicana overviewed the bidding process in order to comply the highest standards of transparency.

Project Details:

- The project scope includes the engineering, procurement, acquisition of real estate rights, permits and governmental approvals, funding, construction, operation and maintenance of a pipeline with a capacity of 2,600 million cubic feet per day (MMCFD). The pipeline will have a length of 225 kilometers (km) and a 42 inch diameter.
- The estimated project implementation time is 26 months.

Geographic Location

State of Texas, USA

Relevant Facts:

Project Investment: **1,366 million** U.S. dollars

Capacity:

2,600 MMCFD

Length (approx.):

225 km
