

Empalme Gas Pipeline Branch

- A gas pipeline branch is a short length pipeline that connects a pipeline system to a fixed point, usually a power generation plant.
- This project will transport natural gas from Sásabe – Guaymas and Guaymas – El Oro gas pipelines to the Empalme I and Empalme II combined cycle power plants, located in the State of Sonora.
- Transparencia Mexicana will overview the bidding process in order to comply the highest standards of transparency.

Project Details:

- The project comprises the engineering, procurement, acquisition of real estate rights, permits and governmental approvals, funding, construction, operation and maintenance of a pipeline with capacity of 226 million standard cubic feet per day (MMSCFD). The pipeline will have a length of 20 kilometers (km) and a 20 and 16-inch diameter.
- The estimated project implementation time is 12 months.

Geographic Location:

State of Sonora
