

Tula Gas Pipeline Branch

- This is a branch gas pipeline; that is, a short length of pipe that runs from a pipeline system to a fixed point, usually a central power generation plant.
- The branch to Tula will transport natural gas from the Cempoala-Santa Ana system to the Tula power generation plant in the State of Hidalgo. It will have a capacity of 505 million cubic feet per day (MCFD).

Project Details:

- The project includes the design, engineering, supply, construction, operation and maintenance. The approximate length of the branch is 17 km and 30-inch diameter.
- The estimated project implementation period is 17 months.

Geographic location State of Hidalgo
