

## San Luis Potosí Combined Cycle Power Plant

- According to CFE's growth forecast, energy demand in the Central region of Mexico will increase an average of 4.1% annually from 2014 to 2028.
- In order to meet this demand, while maintaining regional reserve margins at appropriate levels, this combined cycle power plant will be built in Villa de Reyes, San Luis Potosí.
- This power plant will have a capacity of 789.53 +/- 20% MW under summer design conditions. It will be bidden under a Turnkey scheme.
- The Ministry of Public Administration appointed Transparencia Mexicana as social witness for this public bid.

### Project Details:

- It consists of a lump sum price contract, which comprises the engineering, design, supply of all equipment and materials, spare parts and special tools, testing, commissioning and a power substation.
- This combined cycle may have any of the following configurations: i) a module comprising 3 gas turbines, 3 heat recoveries and a steam turbine; or ii) a module comprising 2 gas turbines, 2 heat recoveries and a steam turbine.
- The estimated project implementation time is 36 months.

### Geographic Location: State of San Luis Potosí.
