

Tuxpan – Tula Gas Pipeline

- Tuxpan – Tula pipeline will transport natural gas from Southern Texas to Mexico. It will supply natural gas to CFE's power generation plants in the States of Veracruz, Puebla and Hidalgo, as well as the Central and Western regions.
- This pipeline will supply natural gas to new power generation plants, as well as those currently operating with fuel oil which will be converted to use natural gas as their base fuel.
- Transparencia Mexicana will overview the bidding process in order to comply the highest standards of transparency.

Project Details:

- This project comprises the design, engineering, procurement, construction, operation and maintenance of a pipeline with capacity of 886 million cubic feet per day (MMCFD). The pipeline will have 283 kilometers long and a 36-inch diameter.
- The estimated project implementation time is 25 months.

Geographic Location:

States of Veracruz, Puebla and Hidalgo
