

## Villa de Reyes – Aguascalientes –Guadalajara Gas Pipeline

- Villa de Reyes – Aguascalientes – Guadalajara gas pipeline will supply natural gas to the CFE’s power generation plants located in the States of Aguascalientes and Jalisco, as well as the Central and Western regions of the country.
- This project will be interconnected to Tula – Villa de Reyes and La Laguna – Aguascalientes gas pipelines, which are about to start their bidding process. This system will supply natural gas to new power generation plants, as well as those currently operating with fuel oil, which will be converted to use natural gas as their base fuel.
- Transparencia Mexicana will overview the bidding process in order to comply the highest standards of transparency.

### Project Details:

- The project comprises the engineering, procurement, acquisition of real estate rights, permits and governmental approvals, funding, construction, operation and maintenance of a pipeline with capacity of 886 million standard cubic feet per day (MMSCFD). The pipeline will have a length of 389 kilometers (km) and a 36-inch diameter.
- The estimated project implementation time is 21 months.

### Geographic Location:

State of San Luis Potosí,  
Aguascalientes and Jalisco

### Relevant Facts:
